SUMMARY

Technical Artist passionate about developing and designing experiences rich in mechanics and gameplay, with a desire for team building and game production.

CORE SKILLS & COMPETENCIES

Engines & Tools: Unity Game Engine, Unreal Engine, Maya, Visual Scripting

Technical Art: Shader Development, Environment Lighting, Particle Systems, VFX Graph, Game Optimization, XR Development

Programming & Systems: Object-Oriented Programming (OOP), HLSL, AI Implementation, Modular Architecture, Finite State Machines, Git, Version Control

Methodologies: Project Management, Game Production, Documentation, Generative-AI Workflows, Rapid Prototyping

Languages: English, Hindi, German

EDUCATION

B.Design in Game Design and Development Artemisia College of Art and Design, Indore | August 2023 - Present

EXPERIENCE & ACTIVITIES

GDAI Student Ambassador | July 2026 - Present

- Assist GDAI in organizing local community events and promoting game development resources to students.

IGDC 2025 - Best Groups Selection

- Received recognition as one of the "Best Groups" for the IGDC 2025 showcase after representing the college with the game Lumin.

Global Game Jam

- Successfully developed and deployed a functional game with a team within a 48-hour period during the first in-person jam.
-

PROJECTS

Knuckle

- Developed custom C# Editor scripts and a node-based pipeline tool to streamline animation and combat design workflows using Unity's GraphView API.
- Engineered a frame-perfect fighting engine utilizing a robust Finite State Machine for precise combat logic and enemy AI behaviour.
- Implemented custom comic style outline shaders and a custom render pass to enhance overall visual aesthetics.

Lumin

- Selected by the college as one of the best games to represent the institution at IGDC 2025.
- Created fully AI-powered NPC behaviors using Google's Gemini API, significantly enhancing player immersion and developed an interactive chat system from scratch.

Sightless

- Developed custom echolocation shaders and a procedural level generator to rapidly build environments within a 48-hour constraint.
- Engineered a custom C# Editor tool to automate the batch conversion of standard assets into sonar-supported materials, accelerating the art pipeline.

Rotor Warfare

- Architected a cross-platform multiplayer game for Windows and Android via Unity Netcode.
- Integrated technical art solutions, including a physics-based destruction and thermal vision shader.
